Brain metastases (BM) are a common complication in patients with advanced renal cell carcinoma. With the use of improved diagnostics and advanced systemic treatment, the overall incidence of BM in RCC is decreasing in the last decade. Nevertheless, brain is still a frequent site of relapse in RCC, and patients with BM have a poor prognosis. This review will present the most relevant points of interest concerning this particular topic. First, it will briefly review the clinical history of BM in RCC and analyze the possible correlations between tumor characteristics and the occurrence of BM. Then, it will focus on advances in the RCC histopathological classification and new insights into the molecular mechanisms underlying tumor progression and metastasis. It will also present the state of the art in the most relevant treatment options for RCC patients with BM, including data on targeted therapies and immunotherapy. Finally, it will present the emerging role of molecular markers in the diagnosis, prognosis, and prediction of the response to treatment of BM. These key points of interest in the special issue of the journal are intended to provide a comprehensive update in this exciting field.5 Healthy Food Options For The Ultra Low Carb Diet A low-carb diet
