When it was introduced, the first version of AutoCAD was only for the Apple Macintosh. This version of AutoCAD was released in 1984, the same year that Apple released the Apple IIe, which made it possible for first-time AutoCAD users to work with the software. The Apple IIe was later the first computer that many new AutoCAD users would come in contact with. The Apple IIe was a 32-bit system, which was unusual at the time, but the Apple IIe had a powerful 64K of memory and could display an entire 128×128 pixel image with just eight sprites. The Apple IIe came with an expansion port that could be used to attach a 2-Mbit EPROM that held a bundled version of AutoCAD. Users could also use the Apple IIe's expansion port to connect an Apple LaserWriter to create PostScript-formatted output that they could read using a standard CAT-4 formatter. While LaserWriter output was not well suited for AutoCAD, many users used it as a way to view layout drawings created on a desktop printer. In the early 1990s, Microsoft released its first version of Windows for the IBM PC-compatible computers and began developing a design program called Windows CAD. Windows CAD was used in three ways. The first way was to develop a Windows version of AutoCAD using the AutoCAD source code and the Windows API. The second was to build a Windows version of AutoCAD using Windows technology and the Microsoft.NET Framework. The final way was to create a Windows version of AutoCAD using the.NET Framework and a custom design application. During the late 1980s and early 1990s, Microsoft released a number of development environments for Windows. Starting with the QuickCAD environment, which was originally released in 1987, and continuing with the Design Environment (later called Visual Studio)

AutoCAD Architect (2010) – released in June 2010, is an open-source project for visualization of architectural 3D models and interactive editing of architectural design data. AutoCAD Architect is now available for all platforms, and is available in English, French, German, Italian, Portuguese, Spanish and Russian. AutoCAD Architect is based on DXF 1.4. Security AutoCAD features two basic security levels: the secure and the advanced. The secure mode is the default mode of operation when AutoCAD is first installed. The advanced security mode is an add-on, which is only available by activation of a product key. Features, security levels and support for additional languages are described in the product's manuals. In addition, there are over 120 self-service options available for use when creating drawings. AutoCAD provides remote-access capabilities with Web Access. On Windows operating systems, the online services can be accessed at the start menu (c:\AutoCAD) or in the Start menu under Autodesk (Programs and Features). On Mac OS X, Web Access can be accessed by double clicking the AutoCAD application icon in the Dock. On iOS, it is available through the AutoCAD App Store. Since AutoCAD 2013, support for the Security Layer can be added. The software can be installed without a valid security layer. Once the Security Layer has been installed, however, it is required for all operations. The setup of a security layer is supported by several methods. A valid security code is required to use the add-on security. The option for the security layer can be activated during the install and/or the license level can be set. If the option for the security layer is deactivated, a message is shown when opening a file, which prompts to activate the layer. AutoCAD does not provide file-encryption. Windows operating systems provide an option in the Advanced Settings of the Windows Disk Protection Settings. Licensing AutoCAD 2016, 2013, 2010, 2009 and 2008 are licensed by edition. Licensed packages are provided free of charge for a limited time after the purchase. Subscription licenses are available for AutoCAD LT, AutoCAD WS and AutoCAD Map3D. They are sold by subscription to the AutoCAD Inc. software, its resellers and distributors. There are three payment options: (1) a one-time payment, (2) a1d647c40b
