AutoCAD plug-ins can be used to: import information into drawings from different sources like spreadsheets or databases Import CAD models from 3D CAD programs to their AutoCAD counterparts Migrate data from one AutoCAD version to the next Execute tasks on the user interface like window-level features and layers or commands that a user can execute on a drawing AutoCAD Viewers are a series of dialog-box containing the AutoCAD commands and a user interface for non-AutoCAD program. In terms of form factor, AutoCAD is available in a variety of formats, including the standard desktop version, desktop add-on packages for use with Microsoft Windows, which include AutoCAD and AutoCAD Map, as well as a variety of mobile applications. AutoCAD Architecture and AutoCAD Electrical are used primarily in the design of commercial buildings. AutoCAD Electrical offers additional capabilities, such as electrical design and analysis, based on the standards used in electrical engineering and electro-mechanical engineering. AutoCAD Architecture is used in the design of multidisciplinary structures and in the management of these structures. AutoCAD Architecture and AutoCAD Electrical are not usually found in the CAD pipeline. Instead they are usually used as an add-on for existing applications. AutoCAD Architecture is used for the design of a building with architectural design capabilities and AutoCAD Electrical is used for the design of the electrical aspects of the building. History AutoCAD was originally developed by New Jersey-based developer Autodesk, Inc. and first released in 1989. After the death of AutoCAD's creator, John Walker, and subsequent lay-off of AutoCAD's development team in 1996, Autodesk took over the development of the software and the company's product line. AutoCAD was originally developed as a desktop application, but as of AutoCAD 2016, the Autodesk Exchange Apps option on AutoCAD allows users to access and edit models and drawings on mobile devices. AutoCAD User interface AutoCAD is primarily a drafting software used for creating 2D and 3D drawing and drafting documentation. The software includes a design and analysis application, component library, databasing, an application builder, as well as various integration and collaboration tools. The primary interface consists of a 2D drawing window. The interface displays a single sheet of the 2D drawing and allows the user to make changes to the drawing. a1d647c40b

Mackie. Music Education for Visual Learning and Social Interaction "Mackie on Music", an innovative music education programme for children aged 5–12 with special needs in Finland, was developed in collaboration with Music Research Finland and Carleton University. Mackie is a programme for children with special needs. It is designed as a theory-grounded method for learning music, based on the three-part concept of Mackie; which includes pedagogy, self-expression and global understanding. The team behind this project, led by Susanne Antilla and Paul Kubicek, was pleased to see this programme come to fruition and is excited to share the music education experience with schools in Finland and elsewhere. Based in Stettin, Mackie has developed their own kit, designed with experts in music pedagogy in mind. The kit includes instruments, music blocks and performance-supporting materials which can be used both in the classroom and at home. "Educating students with special needs has become more and more important in recent years," explains Susanne Antilla, Mackie's Programme Director. "Children with visual impairments are not the only ones who need special attention and care. They share many challenges with other groups of students. We want them to be able to acquire musical knowledge and be active players in their society. Our children also need to be able to enjoy doing creative things and become more independent and confident in their interactions with the world." "Music and creativity have great value for children who are dealing with difficulties in their daily lives and learning activities. Furthermore, if children experience music as a source of pride and joy, they are more likely to commit themselves to new learning. It seems to us that this attitude is what makes children in general so interesting to work with. Music is a powerful tool in learning, and it is a joy to have the opportunity to work with it."
